Test Objectives

The Following test objectives are satisfied in this test plan:

This test plan includes examining a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, an ADT^A03-Discharge message, and an ADT^A01-Admission message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

- Setting (IP, ED, Urgent Care, Ambulatory)
- Chief complaint is captured as a coded value in PV2-3 Admit Reason
- Chief complaint in free-text
- ***Diagnoses are submitted test using SNOMED-CT codes:***Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the ICD-10 CM and SNOMED CT value set (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case
- ***Diagnoses are submitted test using ICD-10-CM codes:***Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the ICD-10 CM and SNOMED CT value set (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case
- ***Patient Name is Identifiable n the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Patient name is pseudonymized in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- Multiple races
- Patient's demographic information is unavailable at registration
- Updates to Diagnoses
- Discharge Disposition Home
- Discharge Disposition Expired
- Update Diagnosis Post-Discharge
- Facility sending the syndromic surveillance message is different than the facility where the patient received care
- Sending required observations where known or applicable
  - pregnancy,
  - travel
  - Tobacco use
  - Initial acuity
  - Body Height
  - Body Weight
  - BMI
  - Triage notes
  - Patient Location
  - Chief Complaint
  - Treating Facility Location
  - Age
    - Pediatric case where age is measured in months.
    - Adult case where age is measured in years.
    -
- Timeliness
- Consistency across messages

Evaluation Criteria
null

Notes
Validation Exceptions: 1. HCPT is an acceptable code (in addition to HCPTNUCC) for OBX-5.3 for the SS003 co-constraint. See the NIST-7 clarification. 2. I10 is an acceptable code (in addition to I10C) for DG1-3.3. See NIST-6 clarification.

1. Urgent Care Visit

Patient is seen in Urgent Care Center and is discharged/dispositioned to home.

1.1. SS-UC-1_UC_Visit_Influenza_Child

Test case addresses a child brought to an urgent care center with influenza and stenosis of external ear canal due to inflammation.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.
The Influenza Child Test Case provides an example of a clinical encounter that could take place in an urgent care setting.. This test case also provides an example where the facility sending the syndromic surveillance message is different than the facility where the patient received care. In this test case, an infant is seen at an urgent care center for fever, cough, and earache. Diagnostic tests show that he has influenza and stenosis of the external ear canal. He is discharged to home with treatment instructions and a prescription. Syndromic surveillance data about the visit are transmitted to the local health department.

This test case involves 3 steps:

- a registration message (ADT^A04),
- followed by an update message (ADT^A08),
- followed by a discharge message (ADT^A03).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance

The following test objectives and variants are supported by this test case:

- Setting is Urgent Care.
- Chief complaint is submitted as free-text.
- ***Patient name is de-identified in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Updates to Diagnoses
- Multiple Races
- Insurance is known

1.1.1. SS-UC-1.1_Registration_A04

Patient is registered at an Urgent Care Center and is assigned a working diagnosis.

Test Story

Description

A mother brings her 6-month old male infant to NIST Hospital`s Urgent Care on February 20, 2025, at 8:30 AM. A clerical assistant registers the patient. She records the patient`s name, date of birth, race, ethnicity, residence, insurance information (PlanID123 from MyInsuranceCompany), and health history. The clerical assistant also records the patient's chief complaint in free-text is, "Fever, cough, and earache." NIST Hospital's Urgent Care is an outpatient facility operated by NIST Hospital.

NIST Hospital routinely sends electronic syndromic surveillance data to the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation for all of it's facilities within that municipal jurisdiction. At 10:00 AM, NIST Hospital`s electronic health record module for syndromic surveillance data assembles and transmits a Registration ADT message about this patient encounter on behalf of the Urgent Care facility as part of an automated process that transmits new or updated content every 15 minutes. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Comments

Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Pre-condition

No Pre-Condition

Post-Condition

No Post-Condition

Test Objectives

This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Urgent Care.
- Chief complaint is submitted as free-text.
- Patient name is de-identified in the submissions: Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- Pediatric case where age is measured in months.
- Multiple Races
- Insurance is known

Evaluation Criteria

Message Validation Report

Notes

Although the other units of measure for patient age are acceptable in general (and the Context-free validation accepts any of the valid units of measure for age), this Scenario specifies that "mo" for months be used in this message for the Context-based validation.

Messages in this test case will be used in a Manual Test Step under functional requirement testing.

The MSH-4 value is agreed upon by the sender and receiver.

1.1.2. SS-UC-1.2_Update_A08

The clinician sees the patient and adds a working diagnosis, demographic updates, and procedure information.

Test Story

Description

At 9:00 AM a nurse sees the patient and performs a vital sign assessment, noting that the child currently has a temperature of 101.2 with a productive cough and right ear inflammation and fluid build-up.

At 9:10 AM, the physician assigns the patient the working diagnoses of influenza with other respiratory manifestations (ICD-10 CM diagnosis code of Influenza due to identified novel influenza A virus with other respiratory manifestations J09.X2), and Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear (ICD-10 CM diagnosis code of H61.329) and documents the information in the patient`s electronic medical record. At 9:15 AM the physician orders a rapid influenza test, chest x-ray, and a treatment. The patient`s vital signs gradually return to normal. A nurse weighs the patient, measures his length, and charts the data in the patient's record. This information is used by the physician when ordering the take-home prescription.

NIST Hospital's Urgent Care is an outpatient facility operated by NIST Hospital that routinely sends electronic syndromic surveillance data to the the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. At 9:15 AM, NIST Hospital`s electronic health record module for syndromic surveillance data assembles and transmits an Update ADT message with the working diagnoses and the height and weight information for this patient encounter on behalf of the Urgent Care facility as part of an automated process that transmits new or updated content every 15 minutes. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

.

Comments

Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data

Pre-condition

A04-Registration message is sent before the A08-Update message.

Post-Condition

Patient record is updated with procedure results, diagnoses and patient height/weight. An ADT*A08 message has been generated with this updated content.

Test Objectives

This test step examines a Health IT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance

The following test objectives and variants are supported by this test case:

- Setting is Urgent Care.
- Chief complaint is submitted as free-text.
- ***Patient name is de-identified in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Updates to Diagnoses
- Multiple Races
- Insurance is known

Evaluation Criteria

Message Validation Report

Diagnosis code (DG1-3) validation behaves as follows:

The table below summarizes the format representations that are accepted for ONC Health IT Module Certification. Rows 1 and 2 show the formats as required by the implementation guide and standard terminology rules and best practices. The last 3 columns show acceptable alternative formats. For this test case one of the following values shall be present in the message:

DG1(1)-3				
Code	**Concept**	**Code System**	**DG1-3 Message Snippet**	**NIST**
	Required Formats based on Recognized Terminology Standards Rules			
J09X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10C	J09X2^Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10C	Yes
442438000	Influenza caused by Influenza A virus (disorder)	SCT	442438000^Influenza caused by Influenza A virus (disorder) ^SCT	Yes
Additional Alternate Allowable Formats and codes based on similar concepts, Common Industry Practice and CDC SMEs Preferences				
J09.X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10C	J09.X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10C	Yes
J09X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10	J09X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations^I10	No
J09.X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10	J09.X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10	No

328531000119104	Upper respiratory tract infection caused by Influenza A (disorder)	SCT	328531000119104^Upper respiratory tract infection caused by Influenza A (disorder)^SCT	Yes
DG1(1)-3				
Code	Concept	Code System	DG1-3 Message Snippet	NIST
Required Formats based on Recognized Terminology Standards Rules				
H61329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10C	H61329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10C	Yes
1090241000119103	Acquired stenosis of external ear canal secondary to infection (disorder)	SCT	1090241000119103^Acquired stenosis of external ear canal secondary to infection (disorder)^SCT	Yes
Additional Alternate Allowable Formats and codes based on similar concepts, Common Industry Practice and CDC SMEs Preferences				
H61.329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10C	H61.329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10C	Yes
H61329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10	H61329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10	No
H61.329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10	H61.329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear ^I10	No
55719006	Acquired stenosis of external ear canal secondary to inflammation (disorder)	SCT	55719006^Acquired stenosis of external ear canal secondary to inflammation (disorder)^SCT	Yes
55989009	Acquired stenosis of external ear canal (disorder)	SCT	55989009^Acquired stenosis of external ear canal (disorder)^SCT	Yes

The NIST column indicates what the NIST Tool Validation will accept in context-based testing (used for ONC Certification). A 'Yes' in the NIST column signifies that the tool will accept the format and not throw an error. A 'No' in the NIST column signifies that the tool will throw an error (specifically for DG1-3.3). However, based on the recommendation from the CDC SMEs and approval from ASTP/ONC the format is acceptable. The NIST test cases documents the instances where the test proctor can grant an exception when the tool issues and error.

Notes

ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data.

ICD-10 CM codes are acceptable with or without decimals.

Although the other units of measure for patient age are acceptable in general (and the Context-free validation accepts any of the valid units of measure for age), this Scenario specifies that "mo" for months be used in this message for the Context-based validation. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

1.1.3. SS-UC-1.3_Discharge_A03

Patient is discharged from Urgent Care Center and is assigned a final diagnosis.

Test Story

Description

At 10 AM, the patient`s laboratory and radiology tests results are provided to the attending physician. The tests indicate that the infant has influenza and does not have pneumonia. The patient`s mother is provided with treatment information and prescriptions for her infant son. The working diagnoses (ICD-10 CM J09.X2 Influenza due to identified novel influenza A virus with other respiratory manifestations and H61.329 Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear) are updated as final diagnoses. At 10:20 AM the patient is discharged home.

NIST Hospital's Urgent Care is an outpatient facility operated by NIST Hospital that routinely sends electronic syndromic surveillance data to the the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. At 10:30 AM on February 20, 2025, NIST Hospital`s electronic health record module for syndromic surveillance data assembles and transmits a Discharge ADT message about this patient encounter on behalf of the Urgent Care facility as part of a routine that transmits new or updated content every 15 minutes. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments

Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Automated triggering in this test case is an example for the test story, but there is no requirement that the System Under Test demonstrate support for such automated triggers.

Pre-condition

A08-Update message is sent before the A03-Disposition message.

Post-Condition

No Post-Condition

Test Objectives

This test step examines a Health IT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria

Message Validation Report

Diagnosis code (DG1-3) validation behaves as follows:

The table below summarizes the format representations that are accepted for ONC Health IT Module Certification. Rows 1 and 2 show the formats as required by the implementation guide and standard terminology rules and best practices. The last 3 columns show acceptable alternative formats. For this test case one of the following values shall be present in the message:

DG1(1)-3				
Code	Concept	Code System	DG1-3 Message Snippet	NIST
Required Formats based on Recognized Terminology Standards Rules				
J09X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10C	J09X2^Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10C	Yes
442438000	Influenza caused by Influenza A virus (disorder)	SCT	442438000^Influenza caused by Influenza A virus (disorder) ^SCT	Yes
Additional Alternate Allowable Formats and codes based on similar concepts, Common Industry Practice and CDC SMEs Preferences				
J09.X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10C	J09.X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10C	Yes

J09X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10	J09X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations^I10	No
J09.X2	Influenza due to identified novel influenza A virus with other respiratory manifestations	I10	J09.X2^ Influenza due to identified novel influenza A virus with other respiratory manifestations ^I10	No
328531000119104	Upper respiratory tract infection caused by Influenza A (disorder)	SCT	328531000119104^Upper respiratory tract infection caused by Influenza A (disorder)^SCT	Yes
DG1(1)-3				
Code	Concept	Code System	DG1-3 Message Snippet	NIST
Required Formats based on Recognized Terminology Standards Rules				
H61329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10C	H61329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10C	Yes
1090241000119103	Acquired stenosis of external ear canal secondary to infection (disorder)	SCT	1090241000119103^Acquired stenosis of external ear canal secondary to infection (disorder)^SCT	Yes
Additional Alternate Allowable Formats and codes based on similar concepts, Common Industry Practice and CDC SMEs Preferences				
H61.329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10C	H61.329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10C	Yes
H61329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10	H61329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear^I10	No
H61.329	Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear	I10	H61.329^Acquired stenosis of external ear canal secondary to inflammation and infection, unspecified ear ^I10	No
55719006	Acquired stenosis of external ear canal secondary to inflammation (disorder)	SCT	55719006^Acquired stenosis of external ear canal secondary to inflammation (disorder)^SCT	Yes
55989009	Acquired stenosis of external ear canal (disorder)	SCT	55989009^Acquired stenosis of external ear canal (disorder)^SCT	Yes

The NIST column indicates what the NIST Tool Validation will accept in context-based testing (used for ONC Certification). A 'Yes' in the NIST column signifies that the tool will accept the format and not throw an error. A 'No' in the NIST column signifies that the tool will throw an error (specifically for DG1-3.3). However, based on the recommendation from the CDC SMEs and approval from ASTP/ONC the format is acceptable. The NIST test cases documents the instances where the test proctor can grant an exception when the tool issues and error.

Notes

ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data.

ICD-10 CM codes are acceptable with or without decimals.

Although the other units of measure for patient age are acceptable in general (and the Context-free validation accepts any of the valid units of measure for age), this Scenario specifies that "mo" for months be used in this message for the Context-based validation.

1.2. SS-UC-2_UC_Visit_Hurricane_Impact

Test case addresses an adult patient seeking care at an urgent care center with gastrointestinal symptoms after exposure hurricane-related floods.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.
The Hurricane Impact Case provides an example of a clinical encounter that could take place in a freestanding urgent care setting.

In this test case, an adult male seeks care for gastrointestinal symptoms. He had been exposed to flood waters following a recent hurricane, and is experiencing vomiting, diarrhea, nausea, and abdominal pain. He is diagnosed with dehydration and treated with IV fluids, and given an injectable antiemetic to help with vomiting. The clinician determines that further investigation and treatment are better handled in an Emergency Room setting, and refers the patient for Emergency care. The jurisdiction requires that the syndromic surveillance messages are sent in with identifiable demographics. Syndromic surveillance data about the visit are transmitted to the state health department. This Test Case will test using SNOMED-CT Dx codes and full, legal patient name. This test case includes documentation of travel and addition of a final diagnosis post-discharge.

This test case involves 3 steps:

- a registration message (ADT^A04),
- followed by an update message (ADT^A08),
- followed by a discharge message (ADT^A03).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Urgent Care.
- Chief complaint is captured as a coded value in PV2-3 Admit Reason.
- ***Patient name is identifiable in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). SNOMED-CT® codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Adult case where age is measured in years.
- Updates to Height and Weight
- Updates to Diagnoses
- Update Diagnosis Post-Discharge
- Insurance is unknown

1.2.1. SS-UC-2.1_Registration_A04

Patient is registered at an Urgent Care Center and is assigned a working diagnosis.

Test Story

Description

62-year-old male walks into NIST Urgent Care on October 20, 2024 at 12:00 PM seeking care for gastrointestinal issues following exposure hurricane-related flood waters. The patient is registered by a clerical assistant who records the patient's name, date of birth, residence information, insurance information (PlanID123 from MyInsuranceCompany), race, ethnicity, smoking status as ex-smoker, and patient's chief complaint, which is “vomiting, diarrhea, nausea, and abdominal pain ".

NIST Urgent Care is an independently operated outpatient facility that routinely sends electronic syndromic surveillance data to the State Department of Public Health (NIST PH SS FAC 2) in accordance with a state regulation. The state regulations permit sending identifiable patient information for the purposes of syndromic surveillance. At 12:15 PM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Registration ADT message about this patient encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments

Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Pre-condition

No Pre-Condition

Post-Condition

An ADT^A04 Registration message has been triggered.

Test Objectives

This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

Evaluation Criteria

Message Validation Report

Notes

Messages in this test case will be used in a Manual Test Step under functional requirement testing.

1.2.2. SS-UC-2.2_Discharge_A03

Patient is discharged from Urgent Care Center and is assigned a final diagnosis.

Test Story

Description
At 12:30 PM, a nurse weighs the patient and measures his height and weight, which determines the patient BMI, and at 1pm. sets up an IV. This information is charted in the patient's record to support the physician in ordering any medications. At 5:00 PM, the physician assigns the patient the reason for visit of 'Noninfective gastroenteritis and colitis, unspecified' and documents the information in the patient`s electronic medical record. The provider sends a stool sample to the lab for confirmation, and documents Home subject to flooding (finding) (SNOMED-CT 224259003) and a working diagnosis of Gastroenteritis (disorder) (SNOMED-CT 25374005) in the patient record, and the patient is discharged home. The provider also documents admitting diagnoses of Dehydration (disorder) (SNOMED-CT 34095006), and Nausea and vomiting (disorder) (SNOMED-CT 16932000). NIST Urgent Care is an independently operated outpatient facility that routinely sends electronic syndromic surveillance data to the State Department of Public Health (NIST PH SS FAC 2) in accordance with state regulation. The state regulations permit sending identifiable patient information for the purposes of syndromic surveillance. in accordance with state regulation. At 6:00 PM on October 20, 2024, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Discharge ADT message about this patient encounter to the state. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data. The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition
A08-Update message is sent before the A03-Disposition message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines a Health IT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
SNOMED-CT and ICD-10 codes are provided/required in the Test Data for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent SNOMED-CT or ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Observation Value	Spent 4 days helping out in the heavily flooded area of Hurricane City. Returned home 2 days prior to symptoms.
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

1.2.3. SS-UC-2.3_Update_A08

The clinician sees the patient and adds a working diagnosis, and procedure information.

Test Story

Description
The test results are available 4-days post-discharge confirming that the patient had a cryptosporidium infection. At 2PM, the physician reviews the test results and updates the patient's record with this new Cryptosporidiosis (disorder) diagnosis ((SNOMED-CT 240370009), and the working diagnosis 'Gastroenteritis (disorder)' (SNOMED-CT 25374005) is updated as a final diagnosis. NIST Urgent Care is an independently operated outpatient facility that routinely sends electronic syndromic surveillance data to the State Department of Public Health (NIST PH SS FAC 2) in accordance with state regulation. At 6:00 PM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits an Update ADT message with the working diagnoses and the height and weight information for this patient encounter to the State Public Health Department (NIST PH SS FAC 2). The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration and A03-Discharge messages are sent before the A08-Update message.

Post-Condition
Patient record is updated with procedures, diagnoses and patient height/weight. An ADT*A08 message has been generated with this updated content.

Test Objectives
This test step examines a Health IT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
SNOMED-CT and ICD-10 codes are provided/required in the Test Data for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent SNOMED-CT or ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

2.1. SS-ED-1_ED_Visit_Patient_Dies

Patient visits ED and dies of head injuries.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.
The ED Visit Test Case provides an example of an ED visit where the patient's demographic information is unavailable at registration, admit/encounter reason is captured as a coded value using an ICD-10 CM code, a working diagnosis and a final diagnosis are captured using ICD-10 CM codes, and the patient dies. This Test Case will test using a pseudonymized patient record.

In this test case, an unconscious, unknown female patient is brought to an emergency department by ambulance after she sustained critical head and neck injuries due to a collision with a bus while she was riding a bicycle. She is placed on a ventilator, diagnosed as having severe head trauma, and expires from her injuries. Syndromic surveillance data about the visit are transmitted to the state health department.

This test case involves 3 steps:

- a registration message (ADT^A04),
- an update message (ADT^A08), and
- a discharge message (ADT^A03).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Emergency Department.
- Chief complaint is captured as a coded value in PV2-3 Admit Reason.
- ***Patient name is de-identified in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Adult case where age is measured in years.
- Updates to Diagnoses
- Discharge Disposition Expired
- Insurance is known

Evaluation Criteria
No Evaluation Criteria

Notes
None

2.1.1. SS-ED-1.1_Registration_A04

Patient is registered in the ED.

Test Story

Description
An unconscious white female with critical injuries to her head and neck is brought by ambulance to NIST Hospital's Emergency Department at 5:00 PM on July 17, 2024. The paramedics report that the patient turned her bicycle in to a bus moving at 35 mph. The collision threw the cyclist, who was not wearing a helmet, head-first to the ground. The patient's vital signs are stable, but she is on ventilation. Unable to find any identification, the patient is registered without her true name, date of birth, race, ethnicity, insurance information, and health history. Her admit/encounter reason is logged as V13.4XXA (Pedal cycle driver injured in collision with car, pick-up truck or van in traffic accident, initial encounter). No working diagnoses are assigned. NIST Hospital reports syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2). At 5:15 PM on July 17, 2024, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A04 Registration message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with a Health IT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
No Pre-Condition

Post-Condition
No Post-Condition

Test Objectives
This test step examines a HIT Module's ability to create ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
ICD-10 CM codes are provided in the Test Data and required for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Test Data Specification

Patient Information

Element	Data
Name	Coded Pseudo-Name to ensure anonymity
Sex	Female
Race	White
City	Chicago
State	Illinois
Zip Code	60601
Country	UNITED STATES
County/Parish Code	
Patient Death Date and Time	
Patient Death Indicator	

Visit Information

Element	Data
Admit or Encounter Reason	The patient turned her bicycle in to a bus moving at 35 mph. The collision threw the cyclist, who was not wearing a helmet, head-first to the ground.
Admit Date and Time	07/17/2024 5:00 PM
Patient Class	Emergency
Diagnosis Type	

Observations[*]

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Facility / Visit Type
Observation Value	Emergency Care
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Age Time Patient Reported
Observation Value	
Units	Unknown
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Height
Observation Value	65
Units	inch
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Weight
Observation Value	128
Units	pound
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	BMI
Observation Value	21.3
Units	kilogram / (meter squared)
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Tobacco Smoking Status
Observation Value	Unknown if ever smoked
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Treating Facility Location
Observation Value	1234 Anywhere Street Doraville Georgia 30341 UNITED STATES 13089
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Triage note:Find:Pt:Emergency department:Doc:
Observation Value	patient sustained critical head and neck injuries due to a collision with a bus while she was riding a bicycle.
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Pregnancy status - reported
Observation Value	No
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Travel Hx Reported
Observation Value	Arrived from France two days ago.
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Patient Location/ Hospital Unit
Observation Value	EmergencyDepartment
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Acuity assessment [Function] at First encounter
Observation Value	Emergent
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

2.1.2. SS-ED-1.2_Update_A08

ED sends updated Syndromic Surveillance message to state health department.

Test Story

Description
Physical examination, CT scan of the head and neck (ICD-10 Procedure Code: BW290ZZ Computerized Tomography (CT Scan) of Head and Neck using High Osmolar Contrast) reveal a fracture to the base of the patient's skull and massive intracranial bleeding. While the patient's examination and diagnostic tests are proceeding an emergency room tech uncovers the patient's driver's license among the belongings brought to the ED by the paramedics along with a flight stub showing she traveled from Paris 2 days earlier. At 5:20 PM the patient's medical record is updated with working diagnosis ICD-10 codes S02.112A (Type III occipital condyle fracture, initial encounter for closed fracture) and S06.9X3A (Unspecified intracranial injury with loss of consciousness of 1 hour to 5 hours 59 minutes, initial encounter). Also at this time, the patient's license is used to update the medical record with name and age. NIST Hospital's Emergenyt Depsartment reports syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) at least once per day. At 5:30 PM on July 17, 2024, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT 08 Update message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration message is sent before the A08-Update message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines an HIT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
ICD-10 CM codes are provided in the Test Data and required for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	Patient Location/ Hospital Unit
Observation Value	EmergencyDepartment
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

2.1.3. SS-ED-1.3_Discharge_A03

Expired patient is discharged (dispositioned).

Test Story

Description
At 5:41 PM, the patient dies. The working diagnoses (ICD-10-CM S02.112A and S06.9X3A) are resolved/inactivated, and the final diagnoses are S06.0X8A (Concussion with LOC of any duration with death due to other cause prior to regaining consciousness) and S02.112A (Type III occipital condyle fracture, initial encounter for closed fracture). NIST Hospital's Emergency Department reports syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) at least once per day. At 5:50, the patient is discharged to the morgue. At 6:00 PM on July 17, 2024, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A03 Discharge message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A08-Update message is sent before the A03-Discharge message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines an HIT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
ICD-10 CM codes are provided in the test data for coding the admit/encounter reason and final diagnoses. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided or uses equivalent SNOMED CT codes, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the ICD-10 CM or SNOMED CT code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. This Test Step does not prescribe the method used by the Health IT Module to change a working diagnosis to a final diagnosis. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Test Data Specification

Patient Information

Element	Data
Name	Coded Pseudo-Name to ensure anonymity
Sex	Female
Race	White
City	Chicago
State	Illinois
Zip Code	60601
Country	UNITED STATES
County/Parish Code	
Patient Death Date and Time	07/17/2017 5:41 PM
Patient Death Indicator	Yes
Insurance Plan ID	PlanID123
Insurance Company ID	88110044

Visit Information

Element	Data
Admit or Encounter Reason	The patient turned her bicycle in to a bus moving at 35 mph. The collision threw the cyclist, who was not wearing a helmet, head-first to the ground.
Admit Date and Time	07/17/2024 5:00 PM
Patient Class	Emergency
Discharge Disposition	Expired
Discharge Date/Time	07/17/2024 6:00 PM
Diagnosis Type	Final
Diagnosis Date/Time	02/20/2024 6:00 PM
Diagnosis	Type III occipital condyle fracture, initial encounter for closed fracture
Diagnosis Date/Time	02/20/2025 5:20 PM
Diagnosis	Concussion with loss of consciousness of unspecified duration, initial encounter
Diagnosis Date/Time	02/20/2025 5:20 PM
Diagnosis	Unspecified intracranial injury with loss of consciousness of 1 hour to 5 hours 59 minutes, initial encounter
Procedure	Computerized Tomography (CT Scan) of Head and Neck using High Osmolar Contrast
Procedure Date/Time	02/20/2025 2:00 PM

2.2. SS-ED-2_ED_Visit_Patient_Admitted

ED Visit with addmission for HBOT.

Test Story

Description

A woman arrives to the Southern Midwest Medical Center's Emergency Department in active labor, and delivers in the emergency department at 7:30 AM on February 1, 2025. The newborn has a Congenital diaphragmatic hernia (CDH), and has suffered Meconium aspiration syndrome (MAS). A clerical assistant registers the newborn as a patient. She records the date of birth, race, ethnicity, residence, insurance information, and health history. The baby has not yet been given a name and is subsequently updated once provided by the mother, The clerical assistant also enters the patient's chief complaint as, "Emergency Room birth with Congenital diaphragmatic hernia (CDH) (ICD-10 Q79. 0),". Upon examination, the physician determines the newborn should be admitted to the hospital NICU and put on ECMO to stabilize the baby before performing surgery to repair the CDH (0BQT0ZZ Repair Diaphragm, Open Approach). The newborn is discharged home after recovering from surgery. The Southern Midwest Medical Center reports syndromic surveillance data to the state health department (SHD). At 7:45 AM on February 1, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits a Registration message about this encounter to SHD.

This Test Case provides an example of an ED visit for which the patient's chief complaint is captured as free-text, working diagnosis and final diagnosis are captured with SNOMED CT codes, the patient is discharged from the ED and admitted for inpatient care, and the Admit/Encounter Reason is captured with a SNOMED CT code.

This test case involves 4 steps:

- a registration message (ADT^A04),
- an update message (ADT^A08),
- a discharge message (ADT^A03)
- an admit message (ADT^A01).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, an ADT^A03-Discharge message, and an ADT^A01-Admission message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Emergency Department with Inpatient Admission.
- Chief complaint is captured as free-text.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). SNOMED-CT® codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- ***Patient Name is Identifiable in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- Multiple Races.
- Pediatric case where age is measured in months.
- Updates to Diagnoses.
- Discharge Disposition Home.
- Insurance is unknown

Notes
No Note

2.2.1. SS-ED-2.1_Registration_A04

Patient is registered in the ED.

Test Story

Description
A woman arrives to the NIST Hospital's Emergency Department in active labor, and delivers in the emergency department at 7:30 AM on February 1, 2025. The newborn has a Congenital diaphragmatic hernia (CDH), which is entered as a working diagnosis, and has suffered Meconium aspiration syndrome (MAS), which is entered as final diagnoses as they were identified upon delivery. At 7:35, a clerical assistant registers the newborn as a patient. She records the patient's date of birth, the height and weight taken at birth, race, ethnicity, residence, insurance information (PlanID123 from MyInsuranceCompany). There is no patient name for the newborn at the time of birth. Southern Midwest Medical Center reports syndromic surveillance data to the City Health Department (NIST PH SS FAC 1). At 7:45 AM on February 1, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits a Registration message about this encounter. The placeholder patient name and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test case to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the Test Case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
No Pre-Condition

Post-Condition
No Post-Condition

Test Objectives
This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Messages in this test case will be used in a Manual Test Step under functional requirement testing.

2.2.2. SS-ED-2.2_Update_A08

ED sends updated Syndromic Surveillance message to state health department.

Test Story

Description
At 8am, an abdominal CT (CPT 74150 Computed tomography, abdomen; without contrast material) is taken to determine the extent of CDH. The mother has also selected a baby name, which is updated in the record. The Abdominal scan shows the newborn has Pericardial and diaphragmatic defect syndrome (724068001) which is entered as the final diagnosis. NIST Hospital reports syndromic surveillance data to the City Health Department (NIST PH SS FAC 1). At 8:15 AM on February 1, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an Update message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test case to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the Test Case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration message is sent before A08-Update message.

Post-Condition
No PostCondition

Test Objectives
This test step examines an HIT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

2.2.3. SS-ED-2.3_Discharge_A03

Patient is discharged (dispositioned) from ED in preparation for admission to hospital.

Test Story

Description
Upon review of the imaging results, the physician determines the newborn should be admitted to the hospital NICU and put on ECMO to stabilize the baby before performing surgery to repair the CDH (0BQT0ZZ Repair Diaphragm, Open Approach). The patient is quickly discharged from the ED and transported within the facility to the NICU . At 8:25 AM, ED staff complete the patient record and administratively discharge the patient from the ED. The working diagnosis is updated to final diagnosis. The patient's final diagnosis is (Pericardial and diaphragmatic defect syndrome (disorder) (SNOMED CT code 724068001)), NIST Hospital reports syndromic surveillance data to the City Health Department (NIST PH SS FAC 1). At 8:30 AM on February 1, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits a Discharge message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test case to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the Test Case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A08-Update message is sent before A03-Discharge message.

Post-Condition
No PostCondition

Test Objectives
This test step examines an HIT Module's ability to create an ADT^A03 Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

2.2.4. SS-ED-2.4_Admission_A01

Patient is prepared for admission to hospital.

Test Story

Description

While the patient is prepared for transport within the hospital for ECMO, the clinical staffers complete an admission record. The Reason for admission is "The Abdominal scan shows the newborn has Pericardial and diaphragmatic defect syndrome.". The Admit Diagnosis is recorded as, "Congenital diaphragmatic hernia (CDH)".

NIST Hospital reports syndromic surveillance data to the City Health Department (NIST PH SS FAC 1). At 8:35 AM on February 1, 2025, the hospitals electronic health record module for syndromic surveillance data assembles and transmits an Admission message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments

Dates and times are provided in this test case to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the Test Case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition

A03-Discharge message is sent before A01-Admission message.

Post-Condition

No Post-Condition

Test Objectives

This test step examines a Health IT Module's ability to create ADT^A01 Admission message within the HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements for syndromic surveillance.

Evaluation Criteria

Message Validation Report

Notes

PV1-2 may be populated with either "E" or "I".

An OBX segment in the A01 message provides the originating visit type information through Facility/Visit Type. The admit described in the ED_Visit_Admit Test Scenario originated in the emergency department; therefore, "261QE0002X^Emergency Care^HCPTNUCC" is in the OBX.5 field in the Example A01 Message. Per ONC, the OBX.5 field may be populated with "1021-5^Inpatient practice setting^HSLOC" for certification testing. The Tool performs automated validation to check for either of those values.

Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data.

Messages in this test case will be used in a Manual Test Step under functional requirement testing.

3.1. SS-IP-1_Inpatient_Surgery_Mortality

Patient has cardiac surgery

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 24 hours of the any given encounter, and in accordance with local or state laws and practices.

The IP Visit-Cardiac Surgery Test Case provides an example of an inpatient surgical visit for a patient with multiple diagnoses. In this scenario, syndromic surveillance data are sent to a state public health agency in accordance with guidelines recommended by the International Society for Disease Surveillance (i.e., once following admission and once following discharge).

In this test case, a middle aged man is admitted for a pre-scheduled surgical removal of a coronary artery obstruction and insertion of stents, spends one night in the hospital for observation, and is discharged home.

This test case involves 2 steps:

- an admission message (ADT^A01),
- a discharge message (ADT^A03).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is inpatient.
- Chief complaint is captured as a coded value in PV2-3 Admit Reason
- ***Patient name is de-identified in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Updates to Diagnoses
- Discharge Disposition Expired

Evaluation Criteria

3.1.1. SS-IP-1.2_Admission_A01

Patient Admitted to Hospital for cardiac surgery

Test Story

Description
On June 17, 2025 at 7:00 AM, a 51-year old male arrives at NIST Hospital for a scheduled surgical removal of a coronary artery obstruction and insertion of stents (Dilation of 2 Cor Art with Intralum Dev, Open Approach (ICD-10-PCS 02710DZ) to treat his cardiac condition (I25110 Atherosclerotic heart disease of native coronary artery with unstable angina pectoris ICD-10-CM). The patient's name, date of birth, race, ethnicity, residence, and insurance information are captured and the patient is escorted to a pre-operation room where a nurse captures the patient's chief complaint as fatigue and shortness of breath, inputs the reason for visit as I25.110 (Atherosclerotic heart disease of native coronary artery with unstable angina pectoris), and documents angina pectoris for the patient's admitting diagnosis (I20.9).The patient is then prepared for the procedure, and at 8:30 AM the patient has the procedure. It occurs without incident, and the patient goes to post-operation recovery unit to wake from anesthesia, and receive a post-op examination. At 2:00 PM the patient, who is in good condition, is transported to a cardiac unit for overnight observation. NIST Hospital reports inpatient syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) for all new patient admissions at least once per day. At 8:00 PM on June 17, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A01 Admission message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration message is sent before A01-Admisssion message.

Post-Condition
No PostCondition

Test Objectives
This test step examines a Health IT Module's ability to create ADT^A01 Admission message within PHIN Syndromic Surveillance Messaging Guide's conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Patient Information

Element	Data
Name	Coded Pseudo-Name to ensure anonymity
Sex	Male
Race	White
Ethnic Group	Hispanic or Latino
City	Columbus
State	Ohio
Zip Code	43058
Country	UNITED STATES
County/Parish Code	39049
Insurance Plan ID	PlanID123
Insurance Company ID	88110044

Visit Information

Element	Data
Admit or Encounter Reason	Atherosclerotic heart disease of native coronary artery with unstable angina pectoris
Admit Date and Time	06/17/2025 7:00 AM
Patient Class	Inpatient
Diagnosis Type	Admitting
Diagnosis Date/Time	06/17/2025 7:00 AM
Diagnosis	Angina pectoris, unspecified
Diagnosis Date/Time	06/17/2025 7:00 AM
Diagnosis	Atherosclerotic heart disease of native coronary artery with unstable angina pectoris

Observations[*]

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Facility / Visit Type
Observation Value	Inpatient practice setting
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Patient Location/ Hospital Unit
Observation Value	Medical cardiac critical care unit
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Age Time Patient Reported
Observation Value	51
Units	year
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	Height
Observation Value	72
Units	inch
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	Weight
Observation Value	235
Units	pound
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Tobacco Smoking Status
Observation Value	Current Light tobacco smoker
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Chief complaint:Find:Pt:Patient:Nom:Reported
Observation Value	Fatigue and shortness of breath
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	BMI
Observation Value	30.2
Units	kilogram / (meter squared)
Observation Results Status	Final results; Can only be changed with a corrected result.

3.1.2. SS-ED-1.2_Update_A08

ED sends updated Syndromic Surveillance message to state health department.

Test Story

Description
At 9:00 AM the next day, the patient is visited by the surgeon and an attending physician who perform a physical to check for signs and symptoms of any post-operation compilations. The patient reports that he is experiencing chest pain. The physicians both observe that the patient has signs of cardiac arrhythmia (I49.9). However, the patient suddenly suffers a pulmonary embolism and dies at 12pm. The pulmonary embolism (ICD-10 I26 Pulmonary embolism) is documented as a final diagnosis. NIST Hospital reports syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) at least once per day. At 12:30 PM on July 17, 2024, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT 08 Update message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with an HIT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration message is sent before the A08-Update message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines an HIT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
ICD-10 CM codes are provided in the Test Data and required for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Test Data Specification

Patient Information

Element	Data
Name	Coded Pseudo-Name to ensure anonymity
Sex	Male
Race	White
Ethnic Group	Hispanic or Latino
City	Columbus
State	Ohio
Zip Code	43058
Country	UNITED STATES
County/Parish Code	39049
Patient Death Date and Time	06/18/2025 12:00
Patient Death Indicator	Yes
Insurance Plan ID	PlanID123
Insurance Company ID	88110044

Visit Information

Element	Data
Admit or Encounter Reason	The patient is scheduled for surgical removal of a coronary artery obstruction and insertion of stents
Admit Date and Time	06/17/2025 7:00 AM
Patient Class	Inpatient
Discharge Disposition	
Discharge Date/Time	
Diagnosis Type	Admitting Final
Diagnosis Date/Time	06/17/2025 7:00 AM
Diagnosis	Angina pectoris, unspecified
Diagnosis Date/Time	06/17/2025 7:00 AM
Diagnosis	Atherosclerotic heart disease of native coronary artery with unstable angina pectoris
Diagnosis Date/Time	06/17/2015 1:00 AM
Diagnosis	Cardiac arrhythmia, unspecified
Diagnosis Date/Time	06/18/2025 12:00
Diagnosis	Cement embolism of pulmonary artery without acute cor pulmonale
Procedure	Dilation of 2 Cor Art with Intralum Dev, Open Approach
Procedure Date/Time	02/20/2025 2:00 PM

Observations[*]

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Facility / Visit Type
Observation Value	Inpatient practice setting
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Patient Location/ Hospital Unit
Observation Value	Medical cardiac critical care unit
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Age Time Patient Reported
Observation Value	51
Units	year
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	Height
Observation Value	72
Units	inch
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	Weight
Observation Value	235
Units	pound
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Tobacco Smoking Status
Observation Value	Current Light tobacco smoker
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:00 AM
Observation Identifier	Chief complaint:Find:Pt:Patient:Nom:Reported
Observation Value	Fatigue and shortness of breath
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	06/17/2025 7:10 AM
Observation Identifier	BMI
Observation Value	30.2
Units	kilogram / (meter squared)
Observation Results Status	Final results; Can only be changed with a corrected result.

3.1.3. SS-IP-1.3_Discharge_A03

Patient Discharged from Hospital to Home

Test Story

Description
At 12:45pm, the body is moved from the inpatient floor to the hospital morgue. The unit coordinator enters the date/time the body leaves the floor as the discharge date and time. The hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A03 Discharge message about this encounter to the State Public Health Department (NIST PH SS FAC 2). NIST Hospital reports inpatient syndromic surveillance data to the State Public Health Department for all new patient discharges at least once per day. At 8:00 PM on June 18, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A03 Discharge message about this encounter to State Public Health Department (NIST PH SS FAC 2). The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data.

Pre-condition
A01-Admission message is sent before A03-Discharge message.

Post-Condition
No PostCondition

Test Objectives
This test step examines a Health IT Module's ability to create ADT^A03 Discharge message within PHIN Messaging Guide's conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Observation Results Status	Final results; Can only be changed with a corrected result.

3.2. SS-IP-2_Inpatient_Visit_Pediatric

This is an inpatient pediatric medical diagnosis visit and treatment for an infant that presents with respiratory symptoms.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For Syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 24 hours of the any given encounter, and in accordance with local or state laws and practices.

The IP – Pediatric Medical Diagnosis Test Case provides an example of an inpatient pediatric medical diagnosis visit and treatment for an infant that presents with respiratory symptoms. In this scenario, Syndromic surveillance data are sent to a state public health agency in accordance with guidelines recommended by the International Society for Disease Surveillance (i.e., once following admission, once for updates, and once following discharge).

In this test case, an 8-week old infant is admitted with severe respiratory symptoms, including runny nose, coughing, sneezing, fever, decreased appetite, wheezing and apnea . The infant is treated with Oxygen Therapy and IV Fluids . After reviewing PCR laboratory results, the pediatrician updates the patient record with a diagnosis of Respiratory Syncytial Virus Infection. Following recovery, the infant is discharged home.

This test case involves 3 steps:

- an admission message (ADT^A01),
- an update message (ADT^A08),
- a discharge message (ADT^A03),
- An update message post-discharge (ADT^A08).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is inpatient.
- Chief complaint is submitted as free-text.
- ***Patient Name is Identifiable in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). SNOMED-CT® codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Updates to Demographics
- Updates to Diagnoses
- Discharge Disposition Home
- Multiple Races

3.2.1. SS-IP-2.1_Admission_A01

Patient Admitted to Hospital for respiratory illness

Test Story

Description

On February 15, 2025 at 7:00 AM, an 8-week old infant is admitted to NIST Hospital with severe respiratory symptoms, including cough, fever, decreased appetite, wheezing and apnea. The infant's pediatrician has ordered the admission, suspecting the child may have contracted Respiratory Syncytial Virus (RSV). A clerical assistant registers the patient for admission. He records the patient's name, date of birth, race, ethnicity, residence, and insurance information. The triage nurse documents the admitting diagnoses as indicated by the pediatrician as:

56018004^Wheezing (finding)

386661006^Fever (finding)^SCT

724229002^Apnea of infancy (disorder)

700213005^Avoidant restrictive food intake disorder (disorder)

417850002^Respiratory tract congestion and cough (disorder)

NIST Hospital reports inpatient syndromic surveillance data to the State Department of Public Health (NIST PH SS FAC 2) for all new patient admissions at least at least once per day. At 7:15 AM on February 15, 2025, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A01 Admission message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments

The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data.

Test Objectives

This test step examines a Health IT Module's ability to create ADT^A01 Admission message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria

Message Validation Report

Notes

Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data.

Messages in this test case will be used in a Manual Test Step under functional requirement testing.

3.2.2. SS-IP-2.2_Update_A08

The Hospital sends updated Syndromic Surveillance message to state health department.

Test Story

Description
The infant is treated with Oxygen Therapy (Extracorporeal Hyperbaric Oxygenation, Continuous ICD-10-PCS 5A05221) and IV Fluids (Introduce Electrol/Water Bal in Periph Vein, Perc ICD-10-PCS 3E0337Z.) After reviewing PCR laboratory results on February 16, 2025 at 1pm, the pediatrician updates the patient record with a diagnosis of Respiratory Syncytial Virus (RSV) Infection, documenting the updated diagnosis at 1pm. NIST Hospital reports inpatient syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) for all new patient admissions at least once per day. At 1:15 PM on February 16, 2015, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A08 Update message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test case to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the Test Case with a Health IT Module, only date and time format will be validated within tester submitted test data.

Pre-condition
A01-Admission message is sent before A08-Update message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines a Health IT Module's ability to create ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Observation Results Status	Final results; Can only be changed with a corrected result.

3.2.3. SS-IP-2.3_Discharge_A03

Patient Discharged from Hospital to Home

Test Story

Description
Following recovery, the infant is discharged home on February 20, 2025 at 5pm. NIST Hospital reports inpatient syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) for all new patient admissions at least once per day. At 5:15 PM on February 20, 2015, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A03 Discharge message about this encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data.

Pre-condition
An A01-Admission message and an A08 Update message is sent before A03-Discharge message.

Post-Condition
No Post-Condition

Test Objectives
This test step examines a Health IT Module's ability to create ADT^A03 Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

4.1. SS-AC-1_Visit_AmbulatoryMeasles_Visit_Child

Test case addresses a child brought to their pediatrician with a rash, fever, cough, and watery eyes.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.

The Ambulatory Visit – PCP New Diagnosis Test Case provides an example of an encounter that takes place in the ambulatory setting. This test case also provides an example where the facility sending the syndromic surveillance message is different than the facility where the patient received care. This Test Case will test using ICD-10 Dx codes and pseudonymized patient name. In this test case, a pediatric patient is seen by his Pediatrician for a rash with a high fever, cough, and watery eyes . The family has recently returned from travel to an amusement park. The pediatrician suspects measles and orders a Real-time RT-PCR to confirm, and provides instruction for home isolation to prevent potential spread. Results received post-discharge are positive for measles, and the patient record is updated with the final diagnosis. Syndromic surveillance data about the visit are transmitted to the local health department.

This test case involves 3 steps:

- a registration message (ADT^A04),
- followed by a discharge message (ADT^A03),
- followed by an update message (ADT^A08)

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Ambulatory.
- Chief complaint is submitted as free-text.
- ***Patient name is de-identified in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Update Diagnosis Post-Discharge
- Discharge Disposition Home
- Multiple Races
- Insurance unknown

Notes
None

4.1.1. SS-AC-1.1_Registration_A04

Patient is registered at an Ambulatory Care Center.

Test Story

Description
A mother brings her 10-month old male infant to see his physician at NIST Primary Care on February 20, 2025, at 8:30 AM. A clerical assistant registers the patient. She records the patient`s name, date of birth, race, ethnicity, residence, insurance information and health history. The clerical assistant also records the patient's chief complaint in free-text as, “Patient has a rash, high fever, cough, and watery eyes.” The mother also reports that they returned 8 days prior to the visit from travel to an amusement park which the clerk also includes in the record. NIST Primary Care is an outpatient facility that routinely sends electronic syndromic surveillance data to the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. At 10:00 AM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Registration ADT message about this patient encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data. The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition
No Pre-Condition

Post-Condition
An ADT^A04 Registration message has been triggered.

Test Objectives
This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Observation Value	Spent 4 days at an amusement park and returned 8 days ago.
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

4.1.2. SS-AC-1.2_Discharge_A03

The clinician sees the patient and adds a working diagnosis, final assessment diagnoses, demographic updates, and procedure information, discharging the patient to home.

Test Story

Description
The pediatrician suspects measles and orders a Real-time RT-PCR to confirm, and provides instruction for home isolation to prevent potential spread. A nurse weighs the patient, measures his length, and charts the data in the patient's record at 8:35. This information may be used by the physician if ordering the take-home prescription. At 8:55 AM, the physician assigns the patient the working diagnoses of measles: (ICD-10 CM diagnosis code of Measles with intestinal complication B05.4), Conjunctivitis (disorder) SNOMED-CT 9826008), Fever, unspecified (SNOMED-CT 426000000), and Hacking cough (finding) (SNOMED-CT 59994004) are documented as final in the patient`s electronic medical record. Suspecting Measles, the provider takes a nasal swab to send for Real-time RT-PCR. The provider recommends isolation at home, providing education to the parents. Education about isolation for infection control (procedure) (SNOMED-CT 737612005). The visit is closed at 9:05 am after the nurse collects the sample to send to the lab. NIST Primary Care is an outpatient facility that routinely sends electronic syndromic surveillance data to the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. At 6:00 PM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Discharge ADT message with height and weight information, as well as the working and final diagnoses for this patient encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data. The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition
A04-Registration message is sent before the A03-Discharge message.

Post-Condition
An A03-Discharge message has been triggered.

Test Objectives
This test step examines a Health IT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Test Data Specification

Patient Information

Element	Data
Name	Coded Pseudo-Name to ensure anonymity
Sex	Male
Race1	White
Race2	Asian
Race3	Native Hawaiian or Other Pacific Islander
Ethnic Group	Not Hispanic or Latino
City	Jamaica Plain
State	Massachusetts
Zip Code	02130
Country	UNITED STATES
County/Parish Code	25025
Patient Death Date and Time	
Patient Death Indicator	
Insurance Plan ID	UNKNOWN
Insurance Company ID	UNKNOWN

Visit Information

Element	Data
Admit or Encounter Reason	Patient has a rash, high fever, cough, and watery eyes
Admit Date and Time	02/20/2025 8:30 AM
Patient Class	Outpatient
Discharge Disposition	Discharged to home or self care (routine discharge)
Discharge Date/Time	02/20/2025 9:05 AM
Diagnosis Type	Final Working
Diagnosis Date/Time	02/20/2025 8:55 AM
Diagnosis	Measles without complication
Diagnosis Date/Time	02/20/2025 8:55 AM
Diagnosis	Acute atopic conjunctivitis, unspecified eye
Diagnosis Date/Time	02/20/2025 8:55 AM
Diagnosis	Fever, unspecified
Diagnosis Date/Time	02/20/2025 8:55 AM
Diagnosis	Cough, unspecified
Procedure	Education and Training for Patient Self-Management
Procedure Date/Time	02/20/2025 9:00 AM
Procedure	Infectious agent detection by nucleic acid
Procedure Date/Time	02/20/2025 9:00 AM

Observations[*]

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 8:30 AM
Observation Identifier	Facility / Visit Type
Observation Value	Primary Care
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 9:00 AM
Observation Identifier	Age Time Patient Reported
Observation Value	10
Units	month
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 9:00 AM
Observation Identifier	Chief complaint:Find:Pt:Patient:Nom:Reported
Observation Value	Patient has a rash, high fever, cough, and watery eyes
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 9:00 AM
Observation Identifier	Tobacco Smoking Status
Observation Value	Never smoker
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 8:30 AM
Observation Identifier	Treating Facility Location
Observation Value	1234 Anywhere Street Doraville Georgia 30341 UNITED STATES 13089
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 8:35 AM
Observation Identifier	Travel Hx Reported
Observation Value	Spent 4 days at an amusement park and returned 8 days ago.
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 8:35 AM
Observation Identifier	Height
Observation Value	29
Units	inch
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/20/2025 8:35 AM
Observation Identifier	Weight
Observation Value	20
Units	pound
Observation Results Status	Final results; Can only be changed with a corrected result.

4.1.3. SS-AC-1.3_Update_A08

Patient is discharged from Primary Care Center and is assigned a final diagnosis.

Test Story

Description
Two days post-visit, the patient`s laboratory tests results are provided to the pediatrician. The tests indicate that the patient has tested positive for measles and the physician updates the working diagnosis Measles (disorder) (SNOMED-CT 14189004) to a final diagnosis at 1pm. NIST Primary Care is an outpatient facility that routinely sends electronic syndromic surveillance data to the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. The state regulations permit sending identifiable patient information for the purposes of syndromic surveillance. in accordance with state regulation. The facility`s electronic health record module for syndromic surveillance data assembles and transmits an Update ADT message about this patient encounter at 6:00 PM. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data. The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition
A03-Disposition message is sent before the A08-Update message.

Post-Condition
An A08-Update message has been triggered.

Test Objectives
This test step examines a Health IT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

4.2. SS-AC-2_Visit_Ambulatory_Injury_Adult

Test case addresses an adult patient seeking care with her primary care provider for a painful, swollen arm.

Test Story

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.

The Ambulatory Visit – Medical Condition Test Case provides an example of an encounter that takes place in the ambulatory setting. This test case also provides an example where the facility sending the syndromic surveillance message is different than the facility where the patient received care. This Test Case will test using SNOMED-CT Dx codes and full, legal patient name..

In this test case, an adult patient is seen by his Primary Care Provider for pain and swelling in the arm after a fall. The provider performs an x-ray of the affected area, revealing a fracture. The provider adds a diagnosis to the patient record indicating the fractured arm (ICD-10 CM S52.6- Fracture of lower end of ulna.) The provider applies a splint, and he is discharged home.

Syndromic surveillance data about the visit are transmitted to the local health department.

This test case involves 3 steps:

- a registration message (ADT^A04),
- followed by an update message (ADT^A08),
- followed by a discharge message (ADT^A03)

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Ambulatory.
- Chief complaint is submitted as free-text.
- ***Patient Name is Identifiable in the submissions:*** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019).The patient name presented in a pseudonymized manner is required for this Test Step.
- ***Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:*** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). SNOMED-CT® codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Update Diagnosis Post-Discharge
- Discharge Disposition Home
- Multiple Races
- Insurance known

4.2.1. SS-AC-2.1_Registration_A04

Patient is registered at a Primary Care Center.

Test Story

Description
A 38 Year-old adult patient is seen by her Primary Care Provider at NIST Primary Care on March 15, 2025 at 2pm for pain and swelling in the arm following a fall. A clerical assistant registers the patient. She records the patient`s name, date of birth, race, ethnicity, residence, insurance information (PlanID123 from MyInsuranceCompany), and health history. The clerical assistant also records the patient's chief complaint in free-text as, “Pain and swelling in the forearm following a fall.” NIST Primary Care is an outpatient facility that routinely sends electronic syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2) syndromic surveillance program in accordance with a state regulation. At 2:30 PM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Registration ADT message about this patient encounter. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data. The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition
No Pre-Condition

Post-Condition
An ADT^A04 Registration message has been triggered.

Test Objectives
This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Messages in this test case will be used in a Manual Test Step under functional requirement testing.

4.2.2. SS-AC-2.2_Update_A08

The nurse documents the patient height and weight. The clinician sees the patient and adds a working diagnosis.

Test Story

Description
At 2:35 PM, the nurse collects the patient's height and weight, documenting it in the patient's record. The provider examines the patient's arm, and sends her for an x-ray of the affected area. revealing a fracture. The provider adds a diagnosis to the patient record indicating the fractured arm (ICD-10 CM S52.6- Fracture of lower end of ulna) as a working diagnosis. The facility`s electronic health record module for syndromic surveillance data assembles and transmits an Update ADT message about this patient encounter to the State Public Health Department (NIST PH SS FAC 2). The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Pre-condition
A04-Registration message is sent before the A08-Update message.

Post-Condition
An A08-Update message has been triggered.

Test Objectives
This test step examines a Health IT Module's ability to create an ADT^A08 Update message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

4.2.3. SS-AC-2.3_Discharge_A03

The provider splints her arm. The patient is discharged from Primary Care Center and is assigned a final diagnosis.

Test Story

Description
The provider reviews the images, and finalized the diagnosis of Stress fracture of left ulna (disorder) (SNOMED-CT 11313841000119108). applies a splint at 3:30, and she is discharged home at 3:45PM. At 4:45 PM, the facility`s electronic health record module for syndromic surveillance data assembles and transmits a Discharge ADT message with height and weight information, the splinting procedure as well as the diagnosis for this patient. The "full, legal patient name" and birth date is included due to state required reporting of all patients, which is not always the case across all jurisdictions.

Comments
Dates and times are provided in this test scenario to illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test scenario with HIT, only date and time format will be validated within tester submitted test data.

Pre-condition
A08-Update message is sent before the A03-Disposition message.

Post-Condition
An A03-Disposition message has been triggered.

Test Objectives
This test step examines a Health IT Module's ability to create an ADT^A03 Disposition message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

Evaluation Criteria
Message Validation Report

Notes
Codes are provided in the test data for coding the diagnoses and procedures. The Tool is designed to accept those codes without generating an error. If the HIT developer uses a different but equivalent coded value within the same code system than the ones provided/accepted, the Tester may ignore errors generated by the Test Tool related to incorrect code/name of coding system when the coded data used in the message are determined via visual inspection to be valid data. ICD-10 CM codes are acceptable with or without decimals. Messages in this test case will be used in a Manual Test Step under functional requirement testing.

Test Data Specification

Patient Information

Element	Data
Sex	Female
Race	Asian
Ethnic Group	Not Hispanic or Latino
City	Jamaica Plain
State	Massachusetts
Zip Code	02130
Country	UNITED STATES
County/Parish Code	25025
Patient Death Date and Time	
Patient Death Indicator	
Insurance Plan ID	PlanID123
Insurance Company ID	88110044

Visit Information

Element	Data
Admit or Encounter Reason	Pain and swelling in the forearm following a fall
Admit Date and Time	03/15/2025 2:00 PM
Patient Class	Outpatient
Discharge Disposition	Discharged to home or self care (routine discharge)
Discharge Date/Time	03/15/2025 3:45 PM
Diagnosis Type	Final
Diagnosis Date/Time	02/01/2025 1:30 PM
Diagnosis	Stress fracture of left ulna (disorder)
Procedure	Contact Radiation of Radius or Ulna
Procedure Date/Time	02/20/2025 2:00 PM
Procedure	Immobilization of Left Lower Arm using Splint
Procedure Date/Time	02/20/2025 3:30 PM

Observations[*]

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 9:00 AM
Observation Identifier	Facility / Visit Type
Observation Value	Primary Care
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 9:00 AM
Observation Identifier	Age Time Patient Reported
Observation Value	38
Units	Year
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 9:00 AM
Observation Identifier	Chief complaint:Find:Pt:Patient:Nom:Reported
Observation Value	Pain and swelling in the forearm following a fall
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 9:00 AM
Observation Identifier	Tobacco Smoking Status
Observation Value	Ex-smoker (finding)
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 9:00 AM
Observation Identifier	Treating Facility Location
Observation Value	1234 Anywhere Street Doraville Georgia 30341 UNITED STATES 13089
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 1:00 PM
Observation Identifier	Height
Observation Value	64
Units	inch
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 1:00 PM
Observation Identifier	Weight
Observation Value	155
Units	pound
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	07/17/2024 5:00 PM
Observation Identifier	BMI
Observation Value	26.6
Units	kilogram / (meter squared)
Observation Results Status	Final results; Can only be changed with a corrected result.

Observation Results Information

Element	Data
Observation Date/Time	02/01/2025 1:00 PM
Observation Identifier	Pregnancy status - reported
Observation Value	No
Units	
Observation Results Status	Final results; Can only be changed with a corrected result.

5. Business Rules

Using messages generated in the Visit use cases, this Test Group addresses business requirements for Syndromic Surveillance.

No Evaluation Criteria

Notes

This Manual Test Step has been included in this Test Case to prompt Testers for the following inspections:

- Visit ID (PV1-19.1) must be populated with the same value for all messages included in each Test Case executed to reflect the requirement in real-world installations.Test Tool does not automatically test for this requirement, so Testers must manually inspect the messages to verify that PV1-19.1 is the same for all Test Step messages for a given Visit Test Case (Urgent Care Visit, ED Visit, Inpatient Visit, Ambulatory Care Visit.
- Visit Time (PV1-44.1) must be populated with the same value for all messages included in this Test Case to reflect the requirement in real-world installations. Test Tool does not automatically test for this requirement, so Testers must manually inspect the messages to verify that Visit Time (PV1-44.1) are the same for all Test Step messages for a given Test Case.

5.1.1. Consistent Visit ID

To reflect the requirement in real-world installations, the HIT Module must demonstrate the capability to • Populate Visit ID (PV1-19.1) with the same value for all messages included within each test case executed.

Test Story

Description
To reflect the requirement in real-world installations, the HIT Module must demonstrate the capability to populate Visit ID (PV1-19.1) with the same value for all messages included within each test case executed. For each executed Visit Test Case (Urgent Care Visit, ED Visit, Inpatient Visit, Ambulatory Care Visit), the tester will visually inspect each of the messages within that test case to verify that Visit ID (PV1-19.1) is the same in each.

Comments
The messages generated from each of the test steps within each Syndromic Surveillance test case executed are to be used to evaluate this test step.

Pre-condition
A01- Admission (where applicable), A04-Registration, A08-Update, and A03-Disposition messages are generated by the HIT Module.

Post-Condition
No Post-Condition

Test Objectives
Demonstrate the capability to populate Visit ID (PV1-19.1) with the same value for all messages included within each executed this Test Case.

Evaluation Criteria
For each message within any test case executed, the value of Visit ID (PV1-19.1) must be populated with the same value. Test Tool does not automatically test for this requirement, so Testers must manually inspect the messages to verify that Visit ID (PV1-19.1) are the same for all Test Step messages for a given Test Case.

Notes
This Manual Test Step has been included in this Test Case to prompt Testers for the following inspections: • Visit ID (PV1-19.1) must be populated with the same value for all messages included in this Test Case to reflect the requirement in real-world installations.

5.1.2. Consistent Visit Time

To reflect the requirement in real-world installations, the HIT Module must demonstrate the capability to • Populate Visit Time (PV1-44.1) with the same value for all messages included within each test case executed.

Test Story

Description
To reflect the requirement in real-world installations, the HIT Module must demonstrate the capability to populate Visit Time (PV1-44.1) with the same value for all messages included within each test case executed. For each executed Visit Test Case (Urgent Care Visit, ED Visit, Inpatient Visit, Ambulatory Care Visit), the tester will visually inspect each of the messages within that test case to verify that Visit Time (PV1-44.1) is the same in each.

Comments
The messages generated from each of the test steps within each Syndromic Surveillance test case executed are to be used to evaluate this test step.

Pre-condition
A01- Admission (where applicable), A04-Registration, A08-Update, and A03-Disposition messages are generated by the HIT Module.

Post-Condition
No Post-Condition

Test Objectives
Demonstrate the capability to populate Visit Time (PV1-44.1) with the same value for all messages included within each executed this Test Case.

Evaluation Criteria
For each message within any test case executed, the value of Visit Time (PV1-44.1) must be populated with the same value. Test Tool does not automatically test for this requirement, so Testers must manually inspect the messages to verify that Visit Time (PV1-44.1) are the same for all Test Step messages for a given Test Case.

Notes
This Manual Test Step has been included in this Test Case to prompt Testers for the following inspections: • Visit Time (PV1-44.1) must be populated with the same value for all messages included in this Test Case to reflect the requirement in real-world installations.

5.2. Timeliness

The system under test provides evidence that the system can be configured to trigger syndromic surveillance messages In a timely manner.

Test Story

Description
The system under test provides evidence that the system can be configured to trigger syndromic surveillance messages within 12 hours as required by the HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm (Jul 2019). The Tester manually reviews the test evidence provided to evaluate whether the HIT Module has the capability to conform to this IG-specified business requirement.

5.2.1. Demonstrate Timeliness

The system under test provides evidence that the system can be configured to trigger syndromic surveillance messages In a timely manner.

Test Story

Description
The HIT Developer provides a description of the approach taken to configure the system under test with the ability to transmit syndromic surveillance messages within 12 hours as required by the HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm (Jul 2019). The HIT Developer provides evidence of such configuration capability. Evidence may be in the form of e.g. configuration files, installation option screens, installation documentation, etc. The Tester manually reviews the test evidence provided to evaluate whether the HIT Module has the capability to conform to this IG-specified business requirement.

Comments
Evidence may be in the form of e.g. configuration files, installation option screens, installation documentation, etc.

Pre-condition
A04-Registration, A08-Update, and A03-Disposition messages are generated by the HIT Module.

Post-Condition
No Post-Condition

Test Objectives
This Manual Test Step enables the Tester to manually evaluate the capability of the HIT Module to submit syndromic surveillance messages within 12 hours of the message trigger event as per the HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm (Jul 2019) conformance requirements.

Evaluation Criteria
The tester visually inspects the test evidence provided and description of how the HIT Module can be configured to transmit syndromic surveillance messages within 12 hours of the message trigger event as per the HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm (Jul 2019) conformance requirements.
