

Description

Syndromic surveillance is public health surveillance that emphasizes the use of near "real-time" health data and statistical tools for disease or hazardous event detection, situation awareness for mass gatherings and public health emergencies, and ad hoc and population health trend analyses. For syndromic surveillance purposes, required data on all clinical encounters must be sent to the jurisdictional public health agency within 12 hours of any given encounter, and in accordance with local or state laws and practices.

The Influenza Child Test Case provides an example of a clinical encounter that could take place in an urgent care setting. This test case also provides an example where the facility sending the syndromic surveillance message is different than the facility where the patient received care. In this test case, an infant is seen at an urgent care center for fever, cough, and earache. Diagnostic tests show that he has influenza and stenosis of the external ear canal. He is discharged to home with treatment instructions and a prescription. Syndromic surveillance data about the visit are transmitted to the local health department.

This test case involves 3 steps:

- a registration message (ADT^A04),
- followed by an update message (ADT^A08),
- followed by a discharge message (ADT^A03).

Messages in this test case will be used in a Manual Test Step under functional requirement testing for validating the HIT capability of populating Visit ID (PV1-19.1) and Visit Time (PV1-44.1) each with the same value for all messages included in this Test Case.

Test Objectives

This test case examines a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, and an ADT^A03-Discharge message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance

The following test objectives and variants are supported by this test case:

- Setting is Urgent Care.
- Chief Complaint is captured as free text.
- **Patient name is de-identified in the submissions:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). The patient name presented in a de-identified manner is required for this Test Step.
- **Diagnoses are submitted test using either ICD-10-CM or SNOMED-CT:** Per ASTP/ONC, for certification testing a Health IT Module can use either the ICD-10-CM or SNOMED CT® value sets in the submitted messages for all of the test steps in the Syndromic Surveillance Test Suite. Where the tool does not have test data that supports the Health IT Module's value set (either ICD-10-CM or SNOMED CT®), the developer of the Health IT Module must provide the codes and testers must perform a visual inspection of the messages for these test steps to ensure that equivalent and valid ICD-10-CM or SNOMED CT® are used to populate the messages. This policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10-CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case.
- Pediatric case where age is measured in months.
- Updates to Diagnoses
- Multiple Races
- Insurance is known
