

Description

An unconscious white female with critical injuries to her head and neck is brought by ambulance to NIST Hospital's Emergency Department at 5:00 PM on July 17, 2024. The paramedics report that the patient turned her bicycle in to a bus moving at 35 mph. The collision threw the cyclist, who was not wearing a helmet, head-first to the ground. The patient's vital signs are stable, but she is on ventilation. Unable to find any identification, the patient is registered without her true name, date of birth, race, ethnicity, insurance information, and health history. Her admit/encounter reason is logged as V13.4XXA (Pedal cycle driver injured in collision with car, pick-up truck or van in traffic accident, initial encounter). No working diagnoses are assigned.

NIST Hospital reports syndromic surveillance data to the State Public Health Department (NIST PH SS FAC 2). At 5:15 PM on July 17, 2024, the hospital's electronic health record module for syndromic surveillance data assembles and transmits an ADT^A04 Registration message about this encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments

The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with a Health IT Module, only date and time format will be validated within tester submitted test data.

Test Objectives

This test step examines a HIT Module's ability to create ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019 conformance requirements.

The following test objectives and variants are supported by this test case:

- Setting is Emergency Department.
- Chief complaint is captured as narrative in PV2-3 Admit Reason.
- **Patient name is de-identified in the submissions:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). The patient name presented in a de-identified manner is required for this Test Step.
- Adult case where age is measured in years.
- Insurance is known

Evaluation Criteria

Message Validation Report

Notes

ICD-10 CM codes are provided in the Test Data and required for coding the diagnoses in this Test Case. If the HIT developer uses different but equivalent ICD-10 CM codes than the ones provided, the Tester may ignore errors generated by the Test Tool related to incorrect code when the ICD-10 CM code data used in the message are determined via visual inspection to be valid data.

ICD-10 CM codes are acceptable with or without decimals.

Messages in this test case will be used in a Manual Test Step under functional requirement testing.
