

Description

A mother brings her 10-month old male infant to see his physician at NIST Primary Care on February 20, 2025, at 8:30 AM. A clerical assistant registers the patient. She records the patient's name, date of birth, race, ethnicity, residence, insurance information and health history. The clerical assistant also records the patient's chief complaint in free-text as, "Patient has a rash, high fever, cough, and watery eyes." The mother also reports that they returned 8 days prior to the visit from travel to an amusement park which the clerk also includes in the record.

NIST Primary Care is an outpatient facility that routinely sends electronic syndromic surveillance data to the City Health Department (NIST PH SS FAC 1) in accordance with a city regulation. At 10:00 AM, the facility's electronic health record module for syndromic surveillance data assembles and transmits a Registration ADT message about this patient encounter. The patient name and birthdate are de-identified in the submission, so no date of birth is included, and the name is represented with name type 'S' to indicate that the name is empty for anonymity.

Comments

The dates and times in this test case illustrate the sequence of clinical and messaging events. Since the exact dates and times are not reproducible when modeling the test case with EHR technology, only date and time format will be validated within tester submitted test data.

The dates within the message and across the messages in this test case will be subject to visual inspection to verify data consistencies and the ability to conform to the requirement to send this message within 12 hours of the event triggering this message.

Pre-condition

No Pre-Condition

Post-Condition

An ADT^A04 Registration message has been triggered.

Test Objectives

This test step examines an HIT Module's ability to create an ADT^A04 Registration message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

- Setting is Ambulatory.
- Chief complaint is captured as narrative in PV2-3 Admit Reason
- **Patient name is de-identified in the submissions:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and de-identified data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). The patient name presented in a de-identified manner is required for this Test Step.
- Pediatric case where age is measured in months.
- Multiple Races
- Insurance unknown

Evaluation Criteria

Message Validation Report

Notes

Messages in this test case will be used in a Manual Test Step under functional requirement testing.
