Test Objectives

The Following test objectives are satisfied in this test plan:

This test plan includes examining a Health IT Module's ability to create an ADT^A04-Registration message, an ADT^A08-Update message, an ADT^A03-Discharge message, and an ADT^A01-Admission message within HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019, conformance requirements.

- Setting (IP, ED, Urgent Care, Ambulatory)
- Chief complaint is captured as a coded value in PV2-3 Admit Reason
- Chief complaint in free-text
- **Diagnoses are submitted test using SNOMED-CT codes:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the ICD-10 CM and SNOMED CT value set (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case
- **Diagnoses are submitted test using ICD-10-CM codes:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the ICD-10 CM and SNOMED CT value set (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). ICD-10 CM codes are provided/required in the Test Data for coding the diagnoses in this Test Case
- **Patient Name is Identifiable in the submissions:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). The patient name presented in a pseudonymized manner is required for this Test Step.
- **Patient name is pseudonymized in the submissions:** Per ASTP/ONC, for certification testing HIT developers must demonstrate that their system supports the Patient Name and pseudonymized data in PID-5 (this policy is conformant to the named standard HL7 Version 2.5.1 Implementation Guide: Syndromic Surveillance, Release 1 - US Realm Standard for Trial Use July 2019). The patient name presented in a pseudonymized manner is required for this Test Step.
- Multiple races
- Patient's demographic information is unavailable at registration
- Updates to Diagnoses
- Discharge Disposition Home
- Discharge Disposition Expired
- Update Diagnosis Post-Discharge
- Facility sending the syndromic surveillance message is different than the facility where the patient received care
- Sending required observations where known or applicable
 - pregnancy,
 - travel
 - Tobacco use
 - Initial acuity
 - Body Height
 - Body Weight
 - BMI
 - Triage notes
 - Patient Location
 - Chief Complaint
 - Treating Facility Location
 - Age
 - Pediatric case where age is measured in months.
 - Adult case where age is measured in years.
 -
- Timeliness
- Consistency across messages

Evaluation Criteria
null
Notes
Validation Exceptions: 1. HCPT is an acceptable code (in addition to HCPTNUCC) for OBX-5.3 for the SS003 co-constraint. See the NIST-7 clarification. 2. I10 is an acceptable code (in addition to I10C) for DG1-3.3. See NIST-6 clarification.
